JEENOKANTH G

jeenojk01@gmail.com | github.com/gitjeeno21 | linkedin.com/in/jeenokanth21/

OBJECTIVE

Final-year Computer Science Engineering student with strong proficiency in Python, SQL, and backend web development. Experienced in building automation scripts, web applications, and data-driven solutions using Django, Flask, NumPy, and Pandas. Skilled in object-oriented programming (OOP), database design, and algorithmic problem-solving. Passionate about developing scalable backend systems and efficient software solutions.

EDUCATION

- Adhiyamaan College of Engineering, Hosur
  B.E - Computer Science and Engineering (2022–2026)
  CGPA: 7.5
- Don Bosco Matriculation Higher Secondary School, Krishnagiri
  HSC (PCM): 81%
  SSLC: 98.2%

SKILLS

- Languages: Python, SQL
- Web Technologies: HTML, CSS , Tailwind CSS
- Libraries: NumPy, Pandas, Matplotlib
- Database: MySQL , Relational Database Concepts
- Tools: Git, GitHub

CERTIFICATIONS

- Python Master Bootcamp – Udemy (2024)
- Advanced Databases and SQL Querying – Udemy
- Data Structures and Algorithms in Python – Infosys Springboard (Certified)
- Dynamic Web Design & Development – Infochord Technologies

INTERNSHIP EXPERIENCE

Web Development Intern – Solublix, Bengaluru
Jun 2025 – Jul 2025

- Developed responsive web pages using HTML, CSS, and JavaScript
- Assisted in backend development using Python (Flask & Django)
- Integrated frontend UI with backend logic and database operations

Data Analytics Intern – Solublix, Krishnagiri

Jan 2026 – Mar 2026

- Performed data analysis using Python (Pandas, NumPy)
- Processed and cleaned structured datasets for reporting
- Generated analytical reports to support internal decision-making

---

PROJECTS

Automated On-Duty Request & Approval Web Portal

- Designed and developed a web-based request system using Django
- Implemented authentication and approval workflows
- Structured backend logic for efficient request processing

AI-Powered Training Data Curation Bot

- Developed a Training Data Bot using Python to assist in preparing structured training datasets.
- Implemented data preprocessing and text cleaning techniques to improve dataset quality.
- Used automation scripts to organize, label, and manage training data efficiently.
- Designed the bot to support AI/ML model training by generating structured and usable datasets.

File Organizer Automation using Python

- Developed a Python script to automatically sort files by type and extension
- Reduced manual file management time significantly
- Implemented OS module and file handling operations

Exploratory Data Analysis (EDA) on Sales Dataset

- Performed Exploratory Data Analysis (EDA) on a sales dataset using Python.
- Cleaned and preprocessed raw data to handle missing values and inconsistencies.
- Used Pandas and Matplotlib to analyze sales trends and customer behavior.
- Generated visual insights to understand product performance and revenue patterns.

Sales & Customer Analysis using SQL

- Analyzed sales and customer data using SQL queries.
- Used aggregation, filtering, and joins to extract meaningful insights.
- Identified top-performing products and customer purchase patterns.
- Generated reports to support data-driven business decisions.

Student Performance Analysis using Python & SQL

- Analyzed student performance data using SQL queries and Python
- Applied data cleaning and aggregation techniques
- Generated insights using data visualization (Matplotlib)
